

Understand the dataset.

Our **tasks** are to tag 4 parts: 1) Topic, 2) Sentiment, 3) Head, 4) Body.
Body is the most difficult (lots of rules) and needs more attention.

The ABA **labeling** consists of 3 parts 1) Head, 2) Body, 3) Contrary.
You don't need to tag Contrary. It will be automatically tagged based on Body.

Example of Positive body: Body is comfortable_bed
Contrary is no_evident_not_comfortable_bed

Example of Negative body: Body is no_soundproof
Contrary is have_evident_no_soundproof

Checkpoint:

1. You will see that the meaning of body and contrary are the same
2. Read the whole sentence by combining head and body, check if it makes sense.
3. Read the whole sentence by combining head and contrary, check if it makes sense.

Both sentences (2, 3) must be understandable otherwise we need to fix the body or unlabel it (tag "Off").

We had ordered a shuttle and thought it was specific to the hotel but it turned out to be just a lambda taxi, the problem is that we waited for it for 40 minutes because it was late but nobody warned us. We had to pay it straight away when we thought it would be included in the hotel bill at the end of the stay. It would be better to indicate directly that it is independent of the hotel, we would not have waited in front of other taxis and tried to reach everyone...	staff_failure_to_communicate_with_taxi
